PROFILE

Junior .NET Backend Developer with approximately 10 months of professional experience in developing and maintaining business applications using C#, ASP.NET Core Web API, Entity Framework Core, and MySQL. Hands-on experience in dynamic database-driven web applications, dashboard APIs, two-level permission/authorization, accounting and financial reporting, employee attendance, payroll, inventory, and reporting modules. Experienced in integrating backend REST APIs with Angular web applications and React Native mobile applications, implementing business logic, database queries, migrations, and production issue troubleshooting.

SKILLS

Backend & Core: C#, .NET, ASP.NET Core, Web API, REST API, LINQ, Entity Framework Core

Database: MySQL, SQL, MySQL Workbench, Database Relationships, Joins, Filtering, Reporting Queries, Migrations

Application Architecture: Dynamic Database Configuration, Dashboard APIs, 2-Level Permission/Authorization, Business Logic, DTOs

Accounting & Reports: Ledger, Ledger Effects/Transactions, Profit & Loss, Balance Sheet, Financial & Business Reports

Frontend / Mobile: Angular, TypeScript, RxJS, Angular Material, React Native, Expo

Architecture & Tools: Dependency Injection, Service Layer, Repository Pattern, SOLID concepts, Git, GitHub, Postman, Visual Studio, VS Code

PROFESSIONAL EXPERIENCE

Junior .NET Backend Developer — S-GEN Consortium Infra Pvt. Ltd.

- Develop and maintain backend services and RESTful APIs using C#, ASP.NET Core, and Entity Framework Core for business web applications.
- Work extensively with MySQL databases for application data, relationships, joins, filtering, reporting, data management, and business queries.
- Develop a dynamic database-driven web application where application data and database access are handled based on configured database links/connection details.
- Develop Dashboard APIs that return dynamic business data based on the selected database and required business filters.
- Implement 2-Level Permission/Authorization to control access to application modules and user functionalities.
- Build and maintain APIs and business logic for employee, attendance, payroll, inventory, accounting, and reporting modules.
- Integrate backend APIs with Angular web applications and React Native mobile applications.
- Use Entity Framework Core migrations for database schema changes and maintain application/database consistency.
- Debug and resolve API, SQL, Entity Framework, validation, date/time, and business-logic issues across development workflows.

PROJECTS

S-GEN Business Management Web Application

Tech Stack: C#, ASP.NET Core Web API, Entity Framework Core, MySQL, Angular, REST APIs

- Developed dynamic database connectivity/configuration, consolidated dynamic Dashboard APIs, and 2-Level Permission/Authorization.
- Built financial reporting functionalities including Ledger Transactions, Profit & Loss reporting, and Balance Sheet data aggregation.
- Supported date-range filtering, DTO mapping, and report-oriented APIs.

Employee Attendance Application

Tech Stack: ASP.NET Core Web API, Entity Framework Core, MySQL, React Native, Expo

- Developed backend APIs for check-in/check-out workflows and attendance status.
- Integrated attendance APIs with the React Native/Expo mobile application, including location data (latitude and longitude).

Payroll & Salary Management

Focus: Salary structure, payroll calculations, deductions, payslips, and yearly salary records

- Calculated salary structure, gross salary, deductions, EPF/ESIC/professional-tax, payslips, and yearly salary records.

Inventory & Stock Reporting

Focus: Project, supplier, item, purchase, stock data, and report filtering

- Handled project, supplier, item, purchase, and stock-related data and report filtering.

KEY ACHIEVEMENTS

- Developed and structured backend APIs for dynamic business applications using ASP.NET Core Web API and Entity Framework Core.
- Implemented dynamic database configuration and Dashboard APIs for database-specific business data.
- Implemented 2-Level Permission/Authorization for module and functionality access control.
- Developed financial reporting APIs covering Ledger Transactions, Profit & Loss, and Balance Sheet data aggregation.
- Integrated backend REST APIs with both Angular web applications and React Native/Expo mobile applications.
- Worked with MySQL reporting queries, relationships, joins, filtering, migrations, and application data management.
- Troubleshot API, SQL, Entity Framework, validation, date/time, and business-logic issues during development.

EDUCATION

Bachelor of Technology (B.Tech) — Information Technology

Bengal Institute Of Technology | CGPA: 8.23

Higher Secondary (12th)

Dakshinrasukpur High School | Percentage: 72%

Secondary (10th)

Madhurpur High School | Percentage: 70.71%

CAREER OBJECTIVE

To grow as a strong backend-focused .NET developer by building scalable business APIs, improving database and application performance, and
